Objective

Recent Computer Science graduate with AI R&D, applied automation, and software engineering internship experience. Passionate about building user-centric software with scalable back-end logic and intuitive design. Pursuing Applied AI Engineer / Junior Software Engineer opportunities to grow in system design while contributing to scalable services and applied AI workflows.

Experience

Priority Dynamics Sdn Bhd

APRIL 2026 – June 2026

Software / AI Automation Intern

- Built Python automation workflows for social media data collection using **APIs**, **Playwright**, **yt-dlp**, and **RapidAPI**, improving repeatability and reducing manual collection effort.
- Replaced selected browser-scraping workflows with API-based data ingestion to improve reliability, reduce maintenance, and speed up collection tasks.
- Configured local-first **OpenClaw** agent workflows to test prompt-driven automation, tool execution, hooks, and scheduled jobs.
- Cleaned, structured, and organized collected data for internal analysis while keeping platform-specific implementation details confidential.

LeadAlways Technology (M) Sdn Bhd

APRIL 2024 – DECEMBER 2024

R&D Department – Internship

- Conducted research on cutting-edge open-source AI frameworks, converting insights into functional prototypes and delivering three proof-of-concept applications.
- Wrote, tested, and refined production code with **FastAPI**, **Docker**, **MongoDB** and **Ubuntu**, boosting deployment reliability.
- Built an automated debt-reminder call platform integrating **Asterisk PBX** with micro-services in **Golang** and **Python**, leveraging **Azure Text to Speech (TTS)** for a natural Malaysian accent and implemented **WebSocket** for real-time call control.
- Deployed a computer-vision pipeline using **Ultralytics YOLO**, **OCR**, and **FastAPI** to identify container IDs and damage, streaming live status to dashboards and improving yard visibility by 50%.
- Achieved 0.77 mAP in real-time traffic analysis by pairing **Ultralytics YOLO** with **DeepSORT** tracking to classify and count entering/exiting vehicles.

Academic Background

Taylor's University

August 2021 – March 2025

Bachelor of Computer Science | CGPA 3.37 / 4.0

Specialization: Artificial Intelligence · Extension: Cybersecurity

Project

My Finance - Full-Stack Personal Finance Web Application

Tech Stack: Next.js, TypeScript, Tailwind CSS, Prisma, PostgreSQL, Neon, Vercel

- Built and deployed a full-stack finance app for tracking income, expenses, categories, and monthly summaries.
- Developed responsive frontend pages with Next.js, TypeScript, and Tailwind CSS, supported by CRUD operations and validation.
- Designed PostgreSQL data models with Prisma and hosted the database on Neon.
- Implemented authentication, automation workflow, and analytics views to improve usability and spending insights.

Local-ai-copilot — Local-first RAG + Agent (FastAPI, Qdrant, Ollama/Qwen)

- Shipped a fully local AI copilot (Docker Compose; no paid APIs)
 - Built RAG ingest for PDF/MD/TXT → Qdrant; answers include source citations
 - Implemented a tool-using agent (3 tools) with audit traces.
-

Volunteer Experience

TEDxPetalingStreet – Logistics Team Volunteer

Mar 2025 – Present

- Ensured smooth venue operations and coordinated 20+ volunteers.
-

Technical Skills

- Languages: Python · Java · C++ · HTML/CSS · JavaScript · TypeScript
- Frameworks: FastAPI · JavaFX · Next.js
- DevOps: Docker · GitHub Actions · Ubuntu · Linux · Vercel
- Databases: MongoDB · MySQL · PostgreSQL
- AI/CV: OpenCV · scikit-learn · TensorFlow · PyTorch · Machine Learning · Ollama
- Automation: OpenClaw · Playwright · yt-dlp · API integration
- Telephony: Asterisk PBX
